Your source for NEW 7526 Terminals

November 20, 2003

## News Brief

[www.data-collection.com](http://www.data-collection.com)

Do you know that you can attach a barcode label printer to a 7526 and create labels on demand? How about attaching a scale directly to the 7526? Maybe you'd like to start or stop a conveyor line?

The 7526 is all-too-often seen as simply a "timeclock" and the wide variety of applications of which it is capable are overlooked.

With 8 Digital Input/Output lines standard on the 7526, this terminal can cause a lock to open or close, a light to light or an alarm to sound. We have spoken with some customers who have been ready to buy separate systems for functions like this when they didn't know their installed 7526 terminals already had the capability built in. A small program change saved the many dollars they were about to spend on additional hardware.

Call us before you spend those extra dollars. We have business partners with years of industrial application experience and technical 7526 knowledge who just might save you money on that new system you have got to get up and running "yesterday".

*Thanks for your business!*

Ron, Jack, Tottie & Ken
