Your source for NEW 7526 Terminals

April 15, 2004

News Brief

www.IBM7526.com

Do you have your Shift-Change Bells synchronized with your 7526s?

Would you like to?

OK, so your 7526s are all synchronized with the time of day on the "Host" PC. That keeps clock-in and clock-out time the same at the front door as the side door or the back door. Some people were surprised to find to find out that the bells or buzzers that sound for shift-changes can be synchronized with the 7526s. If you'd like more information, please send an e-mail message to us at sales@data-collection.com and we'll have one of our Systems Integrators get back to you.

We believe this is just one more example of the forward thinking that went into the design of the 7526 by IBM's engineers.

Thanks for your business.

Ron, Jack, Tottie, Jeanne & Ken
