R&R Services and Repairs, Inc.

Your source for **NEW** 7526 Terminals

October 21, 2004

News Brief

Sales@data-collection.com

Don't let anyone tell you that your IBM 7526 Data Collection Terminals are out of date!

The IBM 7526 Data Collection Terminals have always been and will continue to be the best industrial DCT on the market and R & R Services and Repairs plans to keep it that way. With the integration of the Ethernet card, the RFID proximity reader, biometric fingerprint technology and software applications that connect to Windows® based servers the 7526 offers a wide range of solutions for today's data collection requirements.

If you presently are using 7526 DCTs or you are in the market for a data collection system that has a proven track record you need to contact R & R Services and Repairs. Let us show you how you can improve communications between your DCTs and the server, to be more accurate and secure with employee time and attendance data, to increase security with an up to date access control system and how to integrate your data collection system with Windows® based programs. All this and the peace of mind in knowing that your data collection hardware is maintained and serviced by professional technicians who care about your business and will be around for a long time to come is what you can expect from R & R.

So if you are concerned that your 7526 Data Collection Terminals might be out of date stop worrying and give R & R Services and Repairs a call today and let us show you the future.

Thanks for your business!
