**Keeping ahead of the Game**

The **IBM 7526 Data Collection Terminal with an Ethernet Card** can greatly improve your data collection system and keep you ahead of the game. If you are currently using IBM 7526 Data Collection Terminals and would like to connect to the Ethernet contact R & R Services and Repairs, Inc. and let us explain how we can upgrade your existing unit at a reasonable cost so you can easily connect to the Ethernet and keep the same terminal that you and your employees have been using. If connecting to the Ethernet is a requirement but your present data collection system does not allow access ask about the New 7526 MTC with the on-board Ethernet card.

The **IBM 7526 DCT** is ahead of the game in so many ways, not only does the IBM 7526 connect easily to the Ethernet but with the DIDO port you can use the 7526 as a stand alone access control unit. For example, the unit can send a signal to open a door, take a picture or turn on a machine without being connected to another computer, and can be accessed by using slot readers, (RFID) proximity readers or a fingerprint reader for improved security. So call today and stay ahead of the game. R & R Services and Repairs, Inc. proven products you can count on and reliable service you can trust.
